

27 screens, 9 flows, one map.

Low-fidelity structure only. Visual language lives in AJO-DES-001; behaviour in AJO-PRD-001; scope matches the v2 showcase build (multi-rail sandbox: Stripe, TrueLayer, GoCardless, Griffin spike). Only the current slice is wireframed; p.11 maps the rest.

p.2	F1 Onboarding	01 Welcome · 02 Create account · 03 Verify email
p.3	F2 Identity & rail	04 KYC handoff (Stripe Connect) · 05 Checks pending · 06 Home, empty state
p.4	F3 Wallet	07 Wallet & activity · 08 Top up · 09 Withdraw
p.5	F4 Create a circle	10 Circle setup · 11 Circle Agreement · 12 Invite members
p.6	F5 Join & draw	13 Join via link · 14 Circle recruiting · 15 The draw (commit–reveal)
p.7	F6 Active circle	16 Circle detail · 17 Pay contribution · 18 Circle ledger
p.8	F7 Money out & edges	19 Payout received · 20 Shortfall · 21 Monthly statement
p.9	F8 Admin (desktop)	22 Member 360 · 23 Ops queue · 24 Reversing entry
p.10	F9 Demo console (desktop)	25 Scenario runner · 26 Rail mix · 27 Environment — the pitch operator's cockpit
p.11	Surface map	The 10-year screen inventory, phased — named, not drawn

F1 — Onboarding

Goal: from store link to verified account in under three minutes. No money talk yet.

hero: the circle, made visible

Save together. Safely.

6-digit code

Verify

Resend code (60s)

C

03 Verify email

Notes

- A Regulatory disclosure is present from screen one, footer-fixed. Copy identical everywhere it appears.
- B Legal name captured once, used verbatim for Stripe Connect onboarding and CoP-style name matching on withdrawals. Say why we ask.
- C Code entry, not magic link — civil-service devices often block deep links. Resend throttled to the auth rate limit (5/min/IP).

04 KYC handoff

05 Checks pending

06 Home — empty state

Notes

- A Handoff screen sets expectations before leaving the app; return deep-link lands on 05.
- B rail_status mirrored from account.updated webhooks only — UI never assumes. Neutral copy if compliance hold (no tipping off).
- C Empty home teaches the two entry paths. Wallet card renders even at zero so the safeguarding line is seen early.

07 Wallet & activity

08 Top up

09 Withdraw

Notes

- A Descriptors are plain-English and circle-aware (ledger metadata), not bank-rail strings.
- B Cards absent by design. Each option carries its rail provenance tag - in a live product this would be hidden; in the showcase it IS the demo (one ledger, many rails).
- C First-party rule surfaced as a feature, not a restriction. Mismatch renders the standard error card with remediation.

F4 — Create a circle

The coordinator's five decisions, then a plain-English agreement everyone signs.

Set up your circle

Step 1 of 2 · you can't change these after lock

Circle name

e.g. Lagos Ladies Circle

Members (3-12)

12 Invite members

Notes

- A Collection day offered as payday presets (calendar data) so the cron collects when salaries land.
- B Shortfall rule chosen up front — the MVP supports these two behaviours only; the choice is quoted back in the agreement.
- C Agreement is the contract artifact: versioned, hashed into the draw commitment, re-consent required for any change.
- D Joiners must be KYC-passed before accepting; the list shows agreement state, not just presence.

F5 — Join & the draw

The draw converts 'was it rigged?' into checkable maths. Biggest trust moment in the product.

13 Join via link

14 Recruiting

15 The draw

Notes

- A Join screen leads with the money facts a joiner actually weighs; full agreement one tap deeper, must be opened to join.
- B Commitment hash is published to every member at lock, before the draw. Same string re-shown on 15.
- C 'Verifies OK' is computed client-side from commitment + revealed seed; a 'how to check this yourself' link targets sceptics.

F6 — Active circle

One glyph carries order, progress and whose turn it is. Late is a fact, never a shaming.

18 Circle ledger

Notes

- A Ring is one reusable component at 3 sizes (list, detail, share card). Screen-reader label: '8 members, 5 paid, Folake receives 31 July'.
- B Insufficient-balance path is inline, not a dead end; after Pay-by-Bank settles, collection retries automatically (webhook-driven).
- C This is the coordinator's notebook, public. Fees itemised as their own lines — never netted invisibly.

F7 — Money out & edge states

Payout is the promise kept. Shortfall is the promise managed. Both are designed, not defaulted.

19 Payout received

20 Shortfall

21 Monthly statement

Notes

- A Fee shown at the moment it is charged, arithmetic visible. Reference matches the bank statement line.
- B Copy states the rule the circle chose and its consequence; defaulter is named in the ledger (a fact) but never in push notifications to others.
- C Statement is generated from the ledger, renders the same numbers as the app - one source of truth.

Solo-operator back office. Every action audit-logged; money corrections are reversing entries only.

Notes

A

Timeline merges domain events + operator actions; every row links to the underlying journal entry or webhook.

B

The three queues that page you: failed jobs (DLQ table), recon breaks (nightly Stripe diff), KYC edge cases.

C

Form only produces balanced reversing entries; preview shows the exact postings before commit.

Manual correction

Creates a reversing journal entry. Originals are never edited.

Reverses entry

4. Inject late failure - shortfall2 min

5. Show ledger + recon clean1 min

27 Environment

Surface map — the 10-year inventory

Named and phased, deliberately not wireframed. Wireframe the next validated slice, never the decade.

NOW - wireframed

- Onboarding + KYC (01-06)
- Wallet (07-09)
- Circle lifecycle (10-18)
- Payout / shortfall / statements (19-21)
- Admin seed trio (22-24)
- Demo console (25-27)

MEMBER - post-MVP

- Trust profile + history export
- Notifications centre + prefs
- Settings / devices / security
- Dispute + support threads
- Vulnerable-member disclosures
- Referrals / invite mgmt
- Multi-circle dashboard
- Localisation (Yoruba, Twi, Igbo)

SAVE - Phase 2

- Goal pots + auto-save rules
- Interest accounts (deposit partner)
- Payroll deduction setup + status
- Credit-bureau reporting opt-in
- Financial education hub
- Annual savings review

COOP - Phase 3

- Membership + share account
- Member loans: apply / repay
- Underwriting on circle history
- AGM votes + resolutions
- Dividends / distributions
- Community investment pots

BACK OFFICE - grows to ~half the software

- KYC/EDD case queues + SLAs
- TM alerts + fincrime cases
- SAR drafting + audit pack
- Dual-control approvals (maker/checker)
- Recon workbench + break ageing
- Circle ops playbooks
- Complaints console (DISP/FOS)
- Consumer Duty outcomes dashboards
- Limits + risk-rating tuning
- Access reviews + break-glass log

PLATFORM & B2B

- Employer / payroll partner portal
- Aggregate wellbeing reporting
- Public status page
- Developer API + webhooks (clients)
- White-label theming admin
- Data-residency + retention console

Reading: NOW is drawn on pp.2-10. Every other column ships with its phase gate (PRD sect. 6) and gets wireframed only when its phase is committed. The back-office column is the one first-time founders underestimate: at 100k users it is a product of its own, with its own users (P4).
